FOREWORD

I take immense pleasure in presenting the 2017 Population and Housing Census of Bhutan (PHCB) Dzongkhag Report. The Report contains information on population by age, sex, educational attainment, migration, fertility, disability, mortality, housing amenities, assets, and employment at the *Dzongkhag/Thromde* and *Gewog* levels.

The 2017 PHCB was conducted from 30 May to 01 June 2017 using the *de facto* approach. Extensive efforts have been made to successfully undertake this nationwide census. It involved meticulous planning and systematic preparation in all stages, ranging from stakeholder meetings, questionnaire design, testing of questionnaire, preparation of enumerator and supervisor's manuals, training of trainers, training of enumerators and supervisors, field enumeration, data entry and processing, and analyses and report writing. I commend the hard work and persistent efforts put in by the National Statistics Bureau in successfully completing these processes.

Every country strives to achieve higher socio-economic growth and human development. In order to bring about holistic development, reliable information on the population of the country is required. The Population and Housing Census provides an important dataset that helps us understand changes and trends in population dynamics which are crucial for informed

decision-making at all-levels, both in the public and private sectors.

I am hopeful that the information in this Report would prove useful for evidence based decision-making and formulation of policies and plans. Both the national and local governments could use the census information to define service areas, identify current requirement of services and infrastructure, and predict future demands. Further, it would serve as the basis for measuring progress towards the achievement of key national as well as other time-bound targets in the country.

I would like to express my sincere gratitude and appreciation to all officials in the *Dzongkhags* and *Thromdes* for their active participation and for contributing towards the successful execution of the 2017 PHCB. I would also like to thank the general public for the overwhelming support and cooperation extended to the census officials during the 2017 PHCB field enumeration period from 30 May to 01 June 2017.

A handwritten signature in black ink, appearing to read 'Sonam Topgay'.

(Sonam Topgay)
Vice Chairman
National Census Steering Committee
Royal Government of Bhutan

ACKNOWLEDGEMENT

The 2017 Population and Housing Census of Bhutan (PHCB) entailed nationwide collaboration and coordination. The National Census Secretariat, instituted at the National Statistics Bureau (NSB), would like to take this opportunity to express our sincere gratitude to all the agencies and individuals who contributed to the success of the Census.

We are truly indebted to the Honourable Prime Minister for his steadfast support and the Royal Government of Bhutan for funding the 2017 PHCB in its entirety. We would also like to express our sincerest gratitude to the Honourable members of the National Census Steering Committee (NCSC) for their invaluable counsel, guidance, and support during the implementation of the Census. The NCSC's role in the successful execution of the 2017 PHCB cannot be overstated.

Next, we would like to convey our sincere appreciation to the ministries, governmental and non-governmental agencies, and the *Dzongkhag/Thromde* Administrations for their cooperation and inputs. We are further grateful to the *Dasho Dzongdas* of the 20 *Dzongkhags* and *Dasho Thrompons* of the four *Thromdes* for their support and leadership in ensuring the successful completion of the censuses in their respective *Dzongkhags* and *Thromdes*. We would like to thank the Royal Bhutan Police for arranging security services during the enumeration process and the electronic and print media for their coverage and dissemination of information on the 2017 PHCB.

We also wish to acknowledge and earnestly thank the 9,750 enumerators and supervisors for their hard and sincere work. The commitment shown by the supervisors and enumerators, who worked from the early hours of the morning till late in the evening during the census enumeration period, are exemplary and truly deserving of our utmost appreciation.

Most importantly, we would like to sincerely thank the people of Bhutan for the unprecedented support and cooperation extended to the census officials during the enumeration. The enthusiastic support shown by the public makes us believe that the public understands the importance of the Census, making our task most gratifying.

Finally, I wish to express my sincere appreciation and gratitude to all my colleagues at the NSB and our *Dzongkhag* Statistical Officers for their remarkable efforts, commitment, and dedication to the service of the *Tsa-Wa-Sum*.

SUMMARY TABLE OF KEY FINDINGS

Topic	Indicator	2017
Demographic Characteristics	Total Population	14,437*
	Male	7,407
	Female	7,030
	Sex Ratio (Males per 100 Females)	105.4
	Total Dependency Ratio	60.3
	Child Dependency Ratio	47.3
	Aged Dependency Ratio	13.0
	Population by Broad Age Group	
	0-14 years	4,263
	15-64 years	9,006
	65 years and over	1,168
Education	Literacy Rate (%)	65.4
	Male (%)	73.9
	Female (%)	56.4
	School Attendance (% of 6 Years and Above)	28.8
Health	Crude Birth Rate (Per 1,000 Population)	16.6
	Total Fertility Rate	2.3
	Crude Death Rate (Deaths per 1,000 Population)	8.3
	Infant Mortality Rate	16.7
	Child Mortality Rate	33.5
	Under Five Mortality Rate	50.2
Housing, Household Amenities, and Food Sufficiency	Total Regular Households	3,111
	Average Household Size	3.8
	Improved drinking Water Source (%)	99.2
	Improved Sanitation Facility (%)	75.4

Note: Excludes 21 tourists/non-Bhutanese found in hotels on the census reference day

Section 1: INTRODUCTION

1.1 Background

The overall objective of the 2017 Population and Housing Census of Bhutan (PHCB) is to provide the Government and other development partners with data for the purposes of policy formulation, socio-economic planning, service delivery, and indicators for measuring progress towards the achievement of key government as well as other time-bound targets. In addition, the data collected through the Census are intended to be used for monitoring national and international development initiatives, including sectoral development plans, the Sustainable Development Goals (SDGs), and the International Conference on Population and Development (ICPD).

The Census is an important source of benchmark information on the characteristics of the population and households at the *Dzongkhag* and *Gewog* levels. Disaggregated data are vital for development planning and

evidence-based decision-making at the lower administrative levels. Crucially, *Dzongkhag* data can be used for the allocation of development resources, positioning of social infrastructures and services, research, and policy analyses.

This Report presents information on population, household characteristics, and housing conditions of Lhuentse Dzongkhag. Population characteristics include spatial distribution of the population, age and sex composition, dependency, education and literacy, health, disability, labour and unemployment, and migration. Household characteristics and housing conditions include socio-economic amenities available to households, quality of housing and food sufficiency.

1.2 Legal Basis

In the absence of an act related to population and housing census, the Royal Government of Bhutan issued a Government Order to carry out the 2017

PHCB. In accordance with the Executive Order, the National Census Secretariat (NCS) was established at the National Statistics Bureau (NSB) and National Census Steering Committee (NCSC) was instituted to provide overall policy guidance and advice on the conduct of the 2017 PHCB.

1.3 Administrative set up at the Dzongkhag/Thromde level

In order to execute the census operations on the ground, the Dzongkhag Census

Committee (DCC)/Thromde Census Committee (TCC) were instituted at the *Dzongkhag* and *Thromde* levels respectively with different sector heads as their members. The *Dasho Dzongdas/Thrompons* served as the chairpersons of DCCs/TCCs to oversee the successful conduct of the census operation within their respective *Dzongkhags* and *Thromdes*. The DCC/TCC was also responsible for recruiting supervisors and enumerators for their respective *Dzongkhags/Thromdes*, conducting training, and carrying out field enumeration.

Section 2: DEMOGRAPHIC CHARACTERISTICS

Introduction

Population is the most important resource of any nation. Data on population size, age structure, characteristics, and spatial distribution in a well-defined territory is a basis for plan formulation, resource allocation, and good governance.

It is, therefore, important to fully examine and understand the population dynamics within each *Dzongkhag* to affect specific and proper planning at local level. The 2017 PHCB collected data on important demographic characteristics such as age, sex, marital status, etc.

This section provides a brief analysis of the 2017 PHCB data on population size or the number of people residing in Lhuentse Dzongkhag as of the census reference day. It also looks at the distribution of the population by *gewog* and town and place of residence (urban and

rural). In addition to the size and distribution of the population, this section presents a brief analysis of changes in such parameters by comparing data from the current Census to results from the 2005 PHCB.

2.1 Concepts and Definition

A population census is the total process of collecting, compiling, evaluating, analyzing, and publishing or otherwise disseminating demographic, economic, and social data pertaining, at a specified time, to all persons in a country or in a well-delimited part of a country. The essential features of a population census are individual enumeration, universality within a defined territory, simultaneity, and defined periodicity¹.

The 2017 PHCB was conducted from 30 May to 01 June 2017. The reference date and time for the census

¹ Principles and Recommendations for Population and Housing Censuses, Revision 2: A General Outline* United Nations

enumeration was midnight of 29 May 2017. This means that the 2017 PHCB provides population data of Lhuentse as of 00:00 hours on 30th May 2017.

The 2017 PHCB was conducted based on the *de-facto* method of enumeration (this means that the enumeration is done on the basis of where a person is found at the moment of the Census), though in some isolated cases, the combination of the *de-facto* and the *de-jure* methods was also adopted.

2.2 Population of Lhuentse

The total population of Lhuentse Dzongkhag as of 30 May 2017 was 14,458 persons (Annex Table A2.1). This is the total number of people found within the territory of Lhuentse Dzongkhag on the census reference day irrespective of their nationality. It includes

Table 2.1 Distribution of the population by Gewog/Town and Sex, Lhuentse 2017

Name	Persons		Total
	Male	Female	
Urban			
Lhuentse Town	897	603	1,500
Autsho Town	386	389	775
Rural			
Gangzur	1,141	1,121	2,262
Khoma	731	770	1,501
Kurtoed	379	361	740
Minjey	714	716	1,430
Jarey	494	514	1,008
Maenbi	1,191	1,150	2,341
Maedtsho	470	475	945
Tsaenkhar	1,004	931	1,935
Both Areas	7,407	7,030	14,437

Note: Excludes 21 tourists/non-Bhutanese found in hotels on the census reference day

21 non-Bhutanese/tourists staying in hotels and a few who were on move on the census reference day. The analyses in this Report are based on 14,437 persons since no detailed information was collected from the 21 non-Bhutanese/tourists.

Table 2.1 presents the population of Lhuentse by sex and by *Gewog*/Town. Of the total 14,437 persons, 51.3% were males and 48.7% were females. The total population of Lhuentse Dzongkhag represents 2.0% of the total population of Bhutan.

2.3 Size and Change of Population

Lhuentse Dzongkhag experienced a slight decrease in population size, from 15,395 persons in 2005 to 14,437 persons in the 2017 Census. This is a decrease of some 6.2% between the intercensal periods

Figure 2.1 Distribution of Population by Area, Lhuentse 2005 and 2017

(2005-2017). Lhuentse Dzongkhag ranks the third lowest among all *Dzongkhags* in terms of population size.

2.4 Population by Area

In 2017, for every 100 persons in the *Dzongkhag*, 84 persons lived in rural areas while 16 persons lived in the urban areas (Figure 2.1). At the national level, 62.2 % of the total population lives in rural areas while 37.8 % live in urban areas. The proportion of urban population in Lhuentse Dzongkhag is 15.8%, which is an increase of 6.2 percentage points from the 2005 PHCB.

2.5 Sex Ratio

Sex ratios of a population vary depending on age. In general, at birth, the sex ratio is normally high as there are more boys than girls born each year. As this population grows older, sex ratio changes because males and females have different exposures to risks of dying.

The male population of Lhuentse Dzongkhag exceeded its female population by 377 persons. The sex ratio of Lhuentse (number of males for every 100 females) is 105.4, which is lower than the national sex ratio of 109.7 males for every 100 females.

2.6 Population by Selected Broad Age Groups

Population can be divided into three broad age groups: those less than 15 years (child population); 15-64 years

(productive population); and 65 years and over (elderly population). The distribution of population among these age groups shows that in 2017, the population of those under 15 years in Lhuentse Dzongkhag was 4,263 persons, those between 15 and 64 years was 9,006 persons, and the population of those aged 65 years and over (aged population) was 1,168 persons.

The proportions of population in these broad age groups have significantly changed between 2005 and 2017. The proportion of child population has decreased to 29.5% from 35.4%, while the productive population has increased to 62.4% from 57.8%, and the elderly population to 8.1% from 6.8% during the same period.

2.7 Dependency Ratios

Dependency ratio is an indicator of the economic burden for the care of dependents and is calculated by taking the ratio of the number of dependents to the number of working-age population. 'Dependents' include the children (aged less than 15 years) and the elderly (65 years and over). The total dependency ratio is the sum of the child and old age dependency ratios.

The total and child dependency ratios for Lhuentse Dzongkhag in 2017 have fallen from 73.0 and 61.3 in 2005 to 60.3 and 47.3 respectively, while the aged dependency ratio has increased from 11.7 in 2005 to 13.0 in 2017. The

decline in dependency ratio reflects an increase in the size of the economically active cohort and a decline in the children-infant category (Annex Table A2.3).

The period when the dependency ratio declines is known as the ‘window of opportunity’ when a ‘demographic dividend’ may be reaped because society has a growing number of potential producers relative to the number of consumers. However, as fertility levels continue to decline, dependency ratios eventually increase because the proportion of working age starts to decline and the proportion of older persons continue to increase.

2.8 Population Age-sex Pyramid

Population pyramid is a graphical presentation of age and sex composition of a population. It is a reflection of the past and current fertility patterns. Lhuentse Dzongkhag has a largely young population although a gradual decline in fertility rates was observed in 2017. The length of each bar shows the number of population in each age group. With advancing age, the length becomes shorter as compare to the base of the pyramid. The declining bar at the base indicates the declining fertility rates in the population, while the elongated bars at the top indicate the increase in the number of elderly people due to increasing life expectancy.

Compared to 2005 (shaded), Lhuentse Dzongkhag in 2017 experienced a decline

Figure 2.2 Age Sex Structure of Population, 2005 and 2017

in the number of population in all the age groups until 20-24 years. However, a slight increase in every age group since 20-24 years is observed until the ages 55-59 years for both the sexes.

Figure 2.2 illustrates the differences between the shapes of the population pyramids and the age-sex structure for the population of Lhuentse Dzongkhag between 2005 and 2017. A population bulge is observed between the ages of 10-14 and 15-19 for males, while for females, the highest number of population is observed in the age group 10-14 years.

2.9 Population by type of Household

To ensure complete converge, three types of households were considered: regular households; institutional households; and transient population. These

different types of households are defined as follows:

1. Regular Household consists of a single or a combined household;
 - A single household is defined as a household in which all its members occupy a single house.
 - A combined household is defined as a household in which its members are lodged in rooms located in two or more buildings. A combined household can occur if a household has members eating in one place but has another apartment or census house used by the household.
2. Institutional Household consists of a group of persons who live in an institution, having common arrangement of food or taking their food from a common kitchen.

3. Transient Population includes persons on transit or enroute to a certain destination, e.g. persons who stayed on the census night at airports, bus stands, in vehicles, and persons travelling on foot (trekkers).

Figure 2.3 shows that there were a total of 11,706 persons (81.1%) living in the regular households, 2,429 persons (16.8%) in institutional households, and 302 persons (2.1%) were transient population in 2017. Compared to 2005, the number of regular household population had decreased by about 10.1 percentage points while the institutional and transient populations have increased by about 8.9 and 1.2 percentage points respectively (Annex Table A2.4).

Of the total regular household population, 1,325 persons (11.3%) live in urban areas while 10,381 persons (88.7%) live in rural areas. Of the two towns in Lhuentse Dzongkhag, Lhuentse Town has 896 persons, representing 67.6% of regular household population living in urban areas. Autsho Town has 429 persons (32.4%).

Comparing the regular household population among the *gewogs*, Gangzur Gewog has the highest number of regular household population with 2,089 persons (20.1%), closely followed by Tsaenkhar Gewog with 1,733 persons (16.7%). Kurtoed with 635 persons (6.1%) has the lowest number of regular household population in the *Dzongkhag*.

Figure 2.3 Population by Type of Household, Lhuentse 2005 and 2017

Table 2.2 Distribution of Bhutanese Population by Sex and Gewog/Town, Lhuentse 2017

Gewog/Town	Number of Persons			Percent			Sex Ratio
	Male	Female	Total	Male	Female	Total	
Urban	1,188	989	2,177	54.6	45.4	100.0	120
Lhuentse Town	846	601	1,447	58.5	41.5	100.0	141
Autsho Town	342	388	730	46.8	53.2	100.0	88
Rural	6,050	6,013	12,063	50.2	49.8	100.0	101
Gangzur	1,133	1,119	2,252	50.3	49.7	100.0	101
Khoma	718	750	1,468	48.9	51.1	100.0	96
Kurtoed	374	361	735	50.9	49.1	100.0	104
Minjey	700	716	1,416	49.4	50.6	100.0	98
Jarey	488	513	1,001	48.8	51.2	100.0	95
Maenbi	1,175	1,148	2,323	50.6	49.4	100.0	102
Maedtsho	464	475	939	49.4	50.6	100.0	98
Tsaenkhar	998	931	1,929	51.7	48.3	100.0	107
Both Areas	7,238	7,002	14,240	50.8	49.2	100.0	103

In terms of institutional population among the *gewogs*, Maenbi and Khoma with 613 and 231 persons have the highest number of people living in an institution, while Lhuentse and Autsho Towns have 390 and 346 persons each, representing 53% and 47% of the urban population respectively.

2.10 Bhutanese and Non-Bhutanese Population

The total Bhutanese population of Lhuentse Dzongkhag as of 30 May 2017 was 14,240 persons. Of the total, 7,238 persons were males and 7,002 persons were females. Across the areas, 2,177 persons were found in urban areas and 12,063 persons in rural areas. The total number of non-Bhutanese population of Lhuentse Dzongkhag on the census reference day was 197 persons.

Section 3: EDUCATION

Introduction

The 2017 PHCB collected information on literacy for all population aged 6 years and above and educational attainment for all population aged 3 years and above. The highest level of education completed was collected for all population who were attending school/institute or had attended in the past. In addition, information on attendance of traditional learning was collected.

3.1 Literacy

Literacy is defined as the ability to read and write a short text in *Dzongkha*, English, *Lhotshamkha*, or any other language while literacy rate is defined as the ratio of literate population aged 6 years and above to the total population of same age group expressed in percentage. Out of 12,854 persons aged 6 years and above, 12 had not responded to the literacy questions. Therefore, the literacy rate for the *Dzongkhag* is based on a total population of 12,842 persons. The 2017

PHCB revealed that in 2017, there were 8,393 literate persons in Lhuentse, representing a literacy rate of 65.4% (Figure 3.1). The adult (aged 15 years and above) literacy rate is 57.9%.

Figure 3.1 Literacy Rate by Sex and Area, Lhuentse 2017

Table 3.1 School Attendance for Persons Aged 6 Years and Above by Age Group, Lhuentse 2017

School Attendance	Population (6 Years and Above)	Age Group in Years						Total
		6 - 12	13 - 14	15 - 16	17 - 18	19 - 22	23 and Above	
Total Population	12,840	2,018	662	638	582	809	8,131	100.0%
Currently Attending	3,703	91.1%	82.9%	83.4%	73.7%	27.8%	1.6%	28.8%
Previously Attended	3,424	3.9%	11.6%	10.3%	20.8%	55.0%	32.4%	26.7%
Never Attended	5,713	5.0%	5.4%	6.3%	5.5%	17.2%	66.0%	44.5%

There is marked difference in literacy levels between the male and female populations. Among males, 73.9% of the population are literate as compared to only 56.4% of the female population. The trend is similar in both urban and rural areas although the disparity is relatively larger in rural areas. The disparity in rural areas is 18.6 percentage points as compared to only 5.6 percentage points in urban areas. Overall, the literacy level is substantially higher in urban areas (89.0%) than in rural areas (60.8%).

Comparing the 2005 and 2017 PHCB, the literacy rate of Lhuentse Dzongkhag has increased by 10.4 percentage points. It has increased from 55.0% in 2005 to 65.4% in 2017.

3.2 School Attendance

The official entry age for primary education is 6 years. The overall status of school attendance by age group in Lhuentse Dzongkhag is summarized in Table 3.1. Out of 12,854 persons aged 6 years and above, 14 persons had not responded to questions on the status of school attendance. Therefore, the percentage of population under each category of school

attendance is based on 12,840 persons. Of these, 28.8% are currently attending school/institute, 26.7% had attended in the past, and 44.5% have never attended school/institute.

Across the age groups, the highest proportion of population currently attending school/institute is observed in the age group 6-12 years (91.1%), followed by 15-16 years (83.4%). More than half (66.0%) of the population aged 23 years and above had never attended school/institute. The proportion of population currently attending school/institute is relatively higher in urban areas (45.2%) as compared to only 25.7% in rural areas (Annex Table A3.2.).

Figure 3.2 shows the comparison of school attendance between the 2005 and 2017 PHCB for all persons aged 6 years and above. The proportion of population aged 6 years and above who are currently attending school/institute has declined by less than one percentage point, while those who had attended in the past has increased by 11.9 percentage points (Figure 3.2). In 12 years, the drop in the proportion of population who had never attended school/institute is 11.0

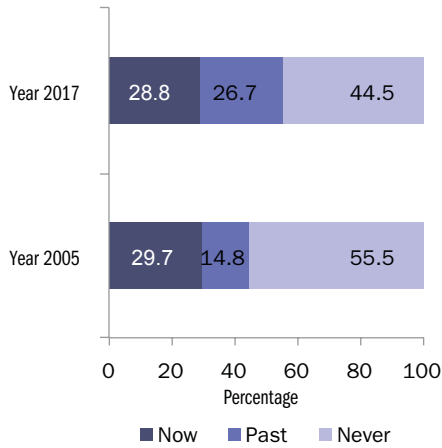

Figure 3.2 School Attendance for Persons Aged 6 Years and Above by Age Group, Lhuentse 2017

percentage points; it declined from 55.5% in 2005 to 44.5% in 2017.

3.3 Educational Attainment

The 2017 PHCB collected information on the highest level of education completed for all population aged 3 years and above if the person is currently attending school/institute or had attended in the past.

Table 3.2 shows the distribution of population 6 years and above by the highest level of education completed² in Lhuentse Dzongkhag. Out of the total population of 7,127 persons who are currently attending school/institute or had attended in the past, 3,270 persons have completed grades between 0³ to 6 (primary), 936 persons have completed grades between 7 to 8 (lower secondary), 893 persons have completed grades between 9 to 10 (middle secondary), and 772 persons have completed any grades between 11 to 12 (higher secondary). It is also observed that 440 persons have completed their bachelor’s degrees while 72 persons hold master’s degrees and above.

In percentages, among those who have completed some levels of education, the highest proportions of population completed the primary level (45.9%), followed by lower secondary levels at

Table 3.2 Population 6 Years and Above by Highest Level of Education Completed, Sex and Area, Lhuentse 2017

Highest Level of Education Completed	Population	Urban			Rural			Both Areas		
		Male	Female	Total	Male	Female	Total	Male	Female	Total
Total Population	7,127	899	716	1,615	2,987	2,525	5,512	3,886	3,241	100.0%
Non-formal Education	498	0.7%	2.5%	1.5%	5.5%	12.2%	8.6%	4.4%	10.1%	7.0%
ECCD/Daycare	41	0.4%	0.1%	0.3%	0.4%	0.9%	0.7%	0.4%	0.7%	0.6%
Primary	3,270	29.4%	32.0%	30.5%	51.8%	48.7%	50.4%	46.6%	45.0%	45.9%
Lower Secondary	936	14.7%	17.5%	15.9%	11.8%	13.0%	12.3%	12.5%	13.9%	13.1%
Middle Secondary	893	15.4%	20.7%	17.7%	10.0%	12.2%	11.0%	11.3%	14.0%	12.5%
Higher Secondary	772	22.5%	20.9%	21.8%	7.4%	7.9%	7.6%	10.9%	10.8%	10.8%
Certificates	51	1.8%	1.3%	1.5%	0.7%	0.2%	0.5%	0.9%	0.5%	0.7%
Diploma	97	4.2%	1.1%	2.8%	1.3%	0.5%	0.9%	2.0%	0.6%	1.4%
Bachelor’s Degree	440	9.1%	3.6%	6.7%	7.9%	3.8%	6.0%	8.2%	3.8%	6.2%
Masters and Above	72	1.7%	0.3%	1.1%	1.5%	0.4%	1.0%	1.6%	0.3%	1.0%
Others	57	0.2%	0.0%	0.1%	1.6%	0.3%	1.0%	1.3%	0.2%	0.8%

2 The highest level of education completed refers to the completion of any grade within a particular education level.
 3 Grade 0 refers to pre-primary.

Table 3.3 Population 6 Years and Above by Attendance of Traditional Learning, Sex and Area, Lhuentse 2017

Traditional Learning	Population	Urban			Rural			Both Areas		
		Male	Female	Total	Male	Female	Total	Male	Female	Total
Total Population	1,094	119	6	125	900	69	969	1,019	75	100.0%
Monastic Public	430	74.8%	33.3%	72.8%	37.0%	8.7%	35.0%	41.4%	10.7%	39.3%
Monastic Private	314	5.0%	50.0%	7.2%	30.2%	47.8%	31.5%	27.3%	48.0%	28.7%
Gomchen/Laymonks	344	20.2%	16.7%	20.0%	32.4%	39.1%	32.9%	31.0%	37.3%	31.4%
Other	6	0.0%	0.0%	0.0%	0.3%	4.3%	0.6%	0.3%	4.0%	0.5%

13.1%. About 6.2% have completed their bachelor's degrees and only 1.0% have completed their master's degrees and above.

Among the persons aged 3-5 years, 215 persons completed pre-primary and/or ECCD.

3.4 Attendance of Traditional Learning⁴

Information on the attendance of traditional learning were also collected for all

population aged 6 years and above. Table 3.3 shows the distribution of population attending traditional learning by sex and areas in Lhuentse Dzongkhag. Out of 12,854 persons aged 6 years and above, 1,094 persons are attending traditional learning. Of these, 39.3% are attending traditional learning in public monasteries and 28.7% in private monasteries, while 31.4% are *Gomchen/Laymonks*. About 89.0% of those attending traditional learning reside in rural areas.

⁴ Traditional learning refers to monastic education in dratshang/shedra/ drubdey/gomdey/patshala. Gomchen/Laymonks are also considered as attending traditional learning.

Section 4: HEALTH

Introduction

Health is an integral part of any human development and the need for timely and reliable health indicator data is crucial. The 2017 PHCB collected information on general health conditions from all members of the household. The Census collected information on fertility, mortality, and disability.

Questions on fertility were asked to women aged 15-49 years in order to collect information on age at first birth, number of children ever born (living and dead), and birth in the last 12 months.

Questions on occurrence of death in the last 12 months prior to the census reference day collected information on age, sex, and cause of death of the deceased including information to identify maternal death.

To understand and measure disability in Bhutan, the Washington Group of questions, which cover six functional domains of seeing, hearing, moving, cognition, self-care, and communication,

were adopted. The disability questions were asked to all members of the household irrespective of age.

4.1 Fertility

The mean age at first birth in Lhuentse is 20 years. The mean age at first birth for urban was 21 years and 20 years for rural.

The child survival rate for Lhuentse is 93.2. Child survival rate is defined as the number of children surviving or living expressed as a percentage of the number of children born in their lifetime to women aged 15–49 years.

The Crude Birth Rate (CBR) is the number of live births in a year per 1,000 populations. The CBR for Lhuentse is 16.6. The CBR for the urban areas in Lhuentse is 17.1 and for the rural areas is 16.4 per 1,000 populations. The overall CBR for Lhuentse has reduced from 20.9 in 2005 to 16.6 in 2017.

General Fertility Rate (GFR) is the number of births during a year per

1,000 women of reproductive age (15–49 years). The GFR for Lhuentse is 68.8 per 1,000 women of reproductive age (15–49 years), which is a significant drop from a GFR of 89.7 in 2005.

General Marital Fertility Rate (GMFR) is the number of births during a year per 1,000 women of reproductive age (15–49 years) who are married or living together. The GMFR for Lhuentse is 105.1 per 1,000 women of reproductive age who are married or living together. The GMFR for Lhuentse has also reduced from 143.0 in 2005 to 105.1 in 2017.

Total Fertility Rate (TFR) is defined as the average number of children a woman would bear during her entire reproductive life, at the prevailing of age-specific fertility rate. The TFR for Lhuentse is 2.3 per woman based on the number of births in the 12 months before the Census. The TFR for the urban areas is 2.4 and for the rural areas is 2.3 per woman. The TFR for Lhuentse has reduced from 3.1 in 2005 to 2.3 in 2017.

4.2 Mortality

Crude Death Rate (CDR) is defined as the number of deaths in a year per 1,000 population. The CDR for Lhuentse is 8.3. It remained unchanged over the last 12 years. The CDR for the urban areas is 4.4 and for the rural areas is 9.0.

Infant Mortality Rate (IMR) is defined as the number of deaths of children below the age of one year per 1,000

Table 4.1 Disability Prevalence Rate by Gewog/Town, Lhuentse 2017

Gewog/Town	Male	Female	Both Sexes
Lhuentse Town	1.1	0.8	1.0
Autsho Town	0.8	0.8	0.8
Gangzur	2.8	4.4	3.6
Khoma	3.0	4.0	3.5
Kurtoed	1.8	2.8	2.3
Minjey	1.8	2.0	1.9
Jarey	2.0	3.9	3.0
Maenbi	1.7	3.1	2.4
Maedtsho	1.9	2.7	2.3
Tsaenkhar	5.2	6.0	5.6
Total	2.4	3.4	2.9

live births in a year and for Lhuentse, the IMR is 16.7, which is a significant drop from an IMR of 49.8 in 2005.

Child Mortality Rate (CMR) is the number of deaths of children between 1-4 years per 1,000 live births in a year; Lhuentse's CMR is 33.5. This is a substantial increase from 12.5 in 2005.

Under Five Mortality Rate (U5MR) is defined as the number of deaths of children below 5 years per 1,000 live births in a year. The U5MR for Lhuentse is 50.2 per 1,000 live births, a decrease from 62.3 in 2005.

4.3 Disability

The information on disability for the Census is based on the Washington Group Short Set of questions on disability. The WG Short Set is a set of questions designed to identify people with a disability. The questions ask whether people have difficulty performing basic universal activities (walking, seeing, hearing, cognition, self-care, and communication).

The disability prevalence rate for Lhuentse according to the cut-off recommended by WG for 2017 is 2.9%. The cut-off recommended by WG defines a person to be disabled if any one domain of seeing, hearing, walking, remembering,

self-care, and communication is coded 'Lot of Difficulty' or 'Cannot do at all.' The highest prevalence rate is found in Tsaenkhar Gewog (5.6%) and the lowest prevalence rate is in Autsho Town (0.8%).

Section 5: LABOUR AND EMPLOYMENT

Introduction

Reliable statistics on labour force are crucial for planning, monitoring, and evaluating economic growth and development. The 2017 PHCB collected information on employment for all persons aged 15 years and above.

This section presents information on working-age population, economically active, economically inactive, labour force participation rate, and unemployment rate.

5.1 Working-age Population, Economically Active and Inactive Population

Table 5.1 shows population 15 years and over by usual activity status in Lhuentse Dzongkhag. Lhuentse Dzongkhag's working-age population (15 years and above) totaled to 10,174 persons: 5,224 are males; and 4,950 females. In urban areas, the working-age population makes

up 14.2%, and in rural areas, it is 85.8%. Of the total working-age population, 6,432 persons (63.2%) are economically active or in labour force. These are people who were either working or indicated they were seeking and available for work. The rest of the working-age population, totaling 3,742 (36.8%) are economically inactive as they do not do any work to generate an income or help in a family business, or are not seeking employment

Table 5.1 Population 15 Years and Over by Usual Activity Status, Lhuentse 2017

Usual Activity	Sex		Area		Total
	Male	Female	Urban	Rural	
Economically Active	3,381	3,051	594	5,838	6,432
Economically Inactive	1,843	1,899	854	2,888	3,742
Both Active and Inactive	5,224	4,950	1,448	8,726	10,174
	Percent				
Economically Active	64.7	61.6	41.0	66.9	63.2
Economically Inactive	35.3	38.4	59.0	33.1	36.8
Both Active and Inactive	100.0	100.0	100.0	100.0	100.0

Table 5.2 Labour Force Rates, Lhuentse 2017

Measure	Urban			Rural			Both Areas		
	Male	Female	Both Sex	Male	Female	Both Sex	Male	Female	Both Sex
Labour Force Participation Rate	50.2	28.9	41.0	67.4	66.4	66.9	64.7	61.6	63.2
Unemployment Rate	0.7	2.8	1.3	1.2	0.7	1.0	1.2	0.8	1.0

on account of them being students, monks/nuns, aged people, housewives, retired, sick, disabled, and others.

5.2 Labour Force Rates

As shown in Table 5.2, the labour force participation rate is slightly higher among the males than females. The overall unemployment rate for Lhuentse

Dzongkhag is 1% and there is no significant difference between the male and female populations. In urban areas, female unemployment rate of 2.8% is much higher than that of males (0.7%), while in rural areas, there is no significant difference between males (1.2%) and females (0.7%).

Section 6: MIGRATION

Introduction

Internal migration is defined as the change of residence from one geographical unit (place of origin) to the place of destination crossing defined territorial boundaries or communities within a country. For this Report, level of geographical units will refer to *Gewog/Town*, which is to say that internal migration is the change in residence across *Gewog/Town*.

6.1 Concepts and Measures

Various parameters such as place of birth, duration of stay, place of previous residence, and place of residence five years ago are used to measure internal migration. These information have been collected in the 2017 PHCB. However, this Report will limit its analysis to the 'place of birth' to measure the level of internal migration in the county. The measure of internal migration with the use of place of birth is also referred to as lifetime migration and the individuals

making the move as lifetime migrants. In the present context, a lifetime migrant is defined as a person whose *gewog/town* of residence on the census reference day differs from the *gewog/town* of birth. The other definitions used in this chapter are as follows:

An in-migrant: a person who enters a geographical area, crossing its boundary from a place outside it within the same country.

An out-migrant: a person who leaves a geographical area, crossing its boundary to another place outside it within the same country.

Place of Enumeration: is the place where an individual is found and enumerated on the census reference day.

Place of Birth: is the place of the mother's usual residence at the time of his/her birth. If the person was born outside Bhutan, the name of the country is taken as the person's birthplace. Migrants and non-migrants are classified based on the place of birth.

Net-migrant: is difference between in-migration and out-migration. It can be positive or negative.

6.2 Lifetime Migration

A total of 4,056 persons are lifetime migrants in Lhuentse meaning that they have moved from their *gewog*/town of birth and are currently residing in Lhuentse. Out of these migrants, 2,213

persons are from other *Dzongkhags/Thromdes*. Conversely, a total 10,664 persons have migrated out of Lhuentse to other *Dzongkhags/Thromdes*.

The percent of urban to urban migrants is 1.9%, urban to rural migrants is 2.6%, rural to urban migrants is 9.0%, and rural to rural migrants is 14.9% for Lhuentse Dzongkhag.

Section 7: HOUSING, HOUSEHOLD AMENITIES, AND FOOD SUFFICIENCY

Introduction

Housing is one of the basic needs of human life. The conditions of housing units determine the quality of life of a population. Housing amenities such as access to improved drinking water, energy sources, and other services are directly associated with a household's welfare or standard of living.

This section presents some of the results from the 2017 PHCB for Lhuentse Dzongkhag in relation to the household size; housing conditions including number of rooms, construction materials for exterior walls, roofing, flooring material, and sanitation facilities; housing amenities such as water supply and energy sources; access to road and other services like communications and technology; ownership of assets; and availing of health facilities.

The section is divided into six parts: household size; housing conditions; housing amenities; ownership of household assets and communication/media facilities; access to road-head and usage of health facilities; and food sufficiency.

7.1 Household Size

There were 3,111 regular households reported in Lhuentse Dzongkhag in 2017. This is a slight increase (3.7%) from the 3,001 regular households reported in 2005. Gangzur Gewog has the largest number of households, while Autsho Town has the smallest number of regular households.

The average household size⁵ in the *Dzongkhag* has reduced to 3.8 persons from 4.7 persons in 2005. The average household size is the ratio of the total

⁵ The average household size is calculated based on the members present in the regular households as well as members absent and outside Bhutan. Those persons who were enumerated as visitors were also included. However, members who were canvassed in the institutions or were absent during census enumeration but were within Bhutan were excluded.

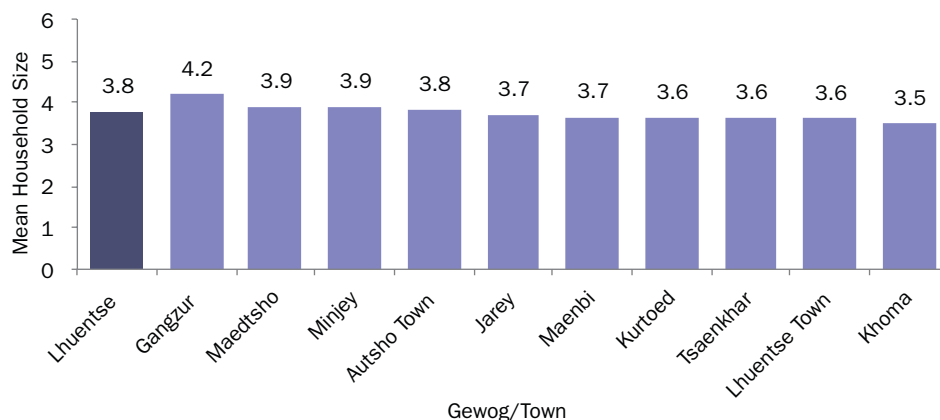

Figure 7.1 Mean Household Size by Gewog/Town, Lhuentse 2017

population in regular households to the number of regular households in an area. Figure 7.1 shows the mean size of regular households by *Gewog/Town*. The mean household size is the highest in Gangzur Gewog (4.2). The lowest household size is recorded in Khoma Gewog with 3.5 persons.

7.2 Housing Conditions

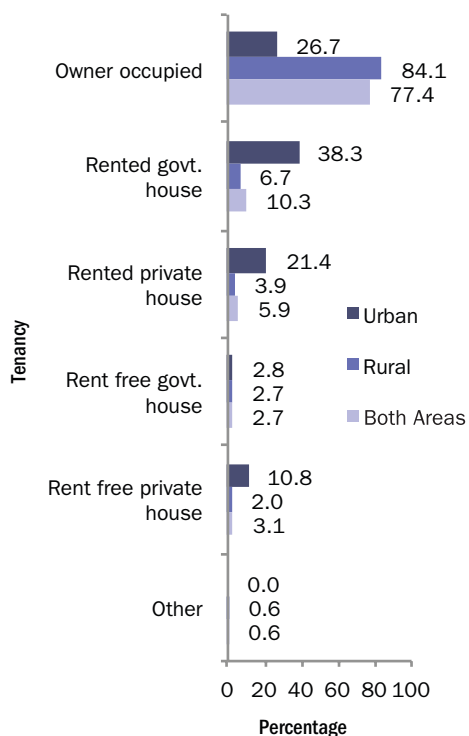

Information collected on the housing conditions during the Census includes ownership of the housing unit, number of rooms, type of toilet facility, and the main materials of walls, roofs and floors.

More than seven in ten of the households in Lhuentse Dzongkhag own their housing units. In rural areas, 84.1% of the households reside in their own housing units, 10.5% are tenants, while the rest live in rent-free private or government houses and other tenancy arrangements. In contrast, in urban areas, only 26.7% of households reside

in their own housing units, about six in ten are tenants (59.7%), while the rest live in housing provided free of rent by private, government, and other tenancy arrangements.

The Census collected information on the number of rooms in the dwellings, excluding toilets, kitchens, bathrooms, and balconies. The number of people sleeping in a room is a major determinant of crowding. The room density in Lhuentse Dzongkhag is slightly lower in urban areas (1.10 persons per room) than in rural areas (1.15 persons per room)

The main toilet facility used at the *Dzongkhag* level is a flush toilet with 63.4% of households reporting using this facility. More households in urban areas (75.8%) than in rural areas (61.8%) used flush toilet. About 2.3% of households do not have toilet facility. The number of households without toilet facility is slightly higher in rural (2.5%) than in urban areas (0.3%).

Figure 7.2 Percent Distribution of Housing Units by Tenancy, Lhuentse 2017

Additionally, 75.4% of households have toilet facilities that are either a flush toilet, Ventilated Improved Pit (VIP), pit latrine with a slab, or composting toilet. These are classified as improved toilet facilities. The remaining households have flush toilet to somewhere else, Pit latrine (without a slab), long drop latrine, or no latrine facilities.

Autsho Town reported the highest proportion of households with improved sanitation facilities at 91.1%, while Jarey Gewog recorded the lowest proportion of households with improved sanitation facilities at 63.2% (Figure 7.3).

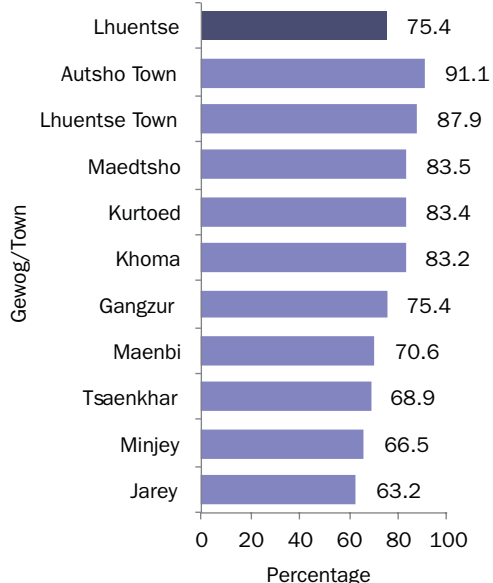

A quarter of households (764) in the *Dzongkhag* lacked access to improved sanitation facilities in 2017. A much sharper focus on disparities in access to sanitation among *gewogs* will allow for targeted interventions. In terms of absolute numbers, Tsaenkhari Gewog had 149 households without access to improved sanitation facilities while Autsho Town had only 10 households (Figure 7.4).

A significant proportion (68.1%) of the households' walls in the *Dzongkhag* are made of stone with mud and stone with lime/cement (Table 7.2). In rural areas, the proportion of such housing units is much higher (74.7%) than in urban areas (17.2%).

Most of the households live in housing units whose roofs are made of metal sheets (91.4%), followed by planks/shingles (5.8%). Planks and shingles are the most common flooring materials (86.2%), followed by tiles/marbles, cement/concrete, and terrazzo (11.1%).

Table 7.1 Room Density (person per room) by Area, Lhuentse 2017

Area	Average Number of Rooms in Dwelling	Average Household Size	Room Density (Person per Room)	Total
Urban	3.36	3.68	1.10	360
Rural	3.29	3.77	1.15	2,751
Both Areas	3.31	3.76	1.14	3,111

Main Source of Energy for Cooking (%)									
Area	Electricity	Kerosene	Firewood	Bio-Gas	LPG	Other	Total		
Urban	100.0	0.0	0.3	1.1	95.0	0.0	360		
Rural	96.3	0.9	32.2	3.2	59.6	0.1	2,751		
Both Areas	96.8	0.8	28.5	3.0	63.7	0.1	3,111		

7.3 Housing Amenities

A majority of the households in Lhuentse Dzongkhag use electricity (97.5%) for lighting though there are still a few households using kerosene (0.6%) and solar energy (0.8%) for the same purpose. There is a slight difference between urban (99.4%) and rural areas (97.2%) in the use of electricity for lighting. The proportion of households using solar energy and kerosene for lighting is slightly higher in rural areas (1.5%) than in urban areas (0.3%).

Most households in Lhuentse Dzongkhag use electricity or LPG as the two main sources of energy for cooking. In urban areas, all the households use electricity (100%) in combination with LPG (95.0%), while the usage of other sources of fuel is negligible. However, in rural areas, about one-third of the households (32.2%) use firewood for cooking.

The main source of drinking water for most households in the *Dzongkhag* is piped water (inside and outside the

dwelling), accounting for 98.8% of all households. In addition, 0.5% of households use protected well/protected spring and rainwater. These sources of drinking water are classified as improved. Some 99.2% of households have access to these improved sources today as compared to 88.0% in 2005. There are more households using piped water inside the dwelling in urban areas (74.2%) than in rural areas (26.0%). About 0.5% of households in rural areas report unprotected well/spring/rivers/ streams/lake/pond/dam as their main source of drinking water (Table 7.4).

Among the *Gewogs/Towns*, all the households (100%) in Lhuentse and Autsho Towns, and Khoma and Kurtoed *Gewogs* have access to improved sources of drinking water while Jarey *Gewog* (97.8%) has the lowest proportion of households with access to improved sources of drinking water (Figure 7.5).

Despite progress in access to improved drinking water sources, 0.8% or some 24 households in the *Dzongkhag*

Table 7.4 Distribution of Households by Main Source of Drinking Water and by Area, Lhuentse 2017

Area	Source of Drinking Water						Total
	Piped Water Inside the Dwelling	Piped water Outside the Dwelling	Protected Well/Protected Spring	Rain Water Collection	Unprotected Well/Spring/Rivers/Streams/Lake/Pond/Dam	Other Source	
Urban	74.2	25.6	0.0	0.3	0.0	0.0	360
Rural	26.0	72.7	0.4	0.0	0.5	0.4	2,751
Both Areas	31.6	67.2	0.4	0.1	0.4	0.4	3,111

depend on unimproved drinking water sources. In terms of absolute numbers, Gangzur Gewog had 8 households without access to improved drinking water sources while Khoma and Kurtoed Gewogs and Lhuentse and Autsho Towns had no household (Figure 7.6).

About 85.8% of all housing units in the *Dzongkhag* have reliable water supply. Reliable water supply is defined as availability of water at least during the critical hours of the day (5AM-8AM, 11AM-2PM and 5PM-9PM) and enough for washing and cooking.

Figure 7.5 Distribution of Households with Access to Improved Sources of Drinking Water by Gewog/Town, Lhuentse 2017

In 2017, a little more than a tenth (434) of the households lacked reliable source of water supply. In terms of absolute numbers, Gangzur Gewog had the highest number of households without reliable sources of water with 115 households while Autsho Town had the lowest with 4 households (Figure 7.7)

About 1.6% of all households in the *Dzongkhag* need to travel at least 30 minutes to the nearest water source (Annex Table A7.11).

Figure 7.6 Distribution of Households without Access to Improved Sources of Drinking Water by Gewog/Town, Lhuentse 2017

Figure 7.7 Distribution of Households without Access to Reliable Sources of Drinking Water by Gewog/Town, Lhuentse 2017

7.4 Ownership of Household Assets and Communication/Media Facilities

Information was collected on the ownership of certain assets and communication/media facilities at the household level. Assets include land/plot, house/building, livestock, business, vehicle (commercial), vehicle (non-commercial), fridge, washing machine, machinery, sofa, sewing machine, vacuum cleaner, rice cooker, jewelry, Direct To Home (DTH), wrist watch, bicycle, television/video, etc. For information on the ownership of household assets and communication/media facilities at the *Dzongkhag* level and by urban and rural areas refer to Annex Table A7.13-A7.15.

7.5 Access to Road-head and Usage of Health Facilities

The majority (88.6%) of households in the *Dzongkhag* have access to the nearest road head in less than 30 minutes. This is a substantial improvement from 2005 (30.2%). However, there are some households (0.7%) in the *Dzongkhag* that still need to travel for more than six hours to reach the nearest road point.

The majority of households (90.6%) in Lhuentse availed health services during the 12 months prior to the census reference day. Among those households that did not avail health services, 72.7% stated that they did not require health services, 9.9% stated that the health facilities were too far, and 8.5% stated that they did not have enough time to avail health services.

7.6 Food Sufficiency

About 8.4% of households in the *Dzongkhag* reported to having experienced food insufficiency (not enough food to feed all household members) during the 12 months prior to the Census. The situation of food insufficiency among households is higher in rural areas (9.2%) than in urban areas (2.2%).

Households experiencing food insufficiency vary across the *Gewogs/Towns*. Of the 261 households (8.4%) that have experienced food insufficiency, Gangzur Gewog had 60 households while Autsho and Lhuentse Towns had only 4 households each reporting food insufficiency (Figure 7.9).

Figure 7.8 Percent Distribution of Households by Time Taken to Reach the Nearest Road-head, Lhuentse 2005 and 2017

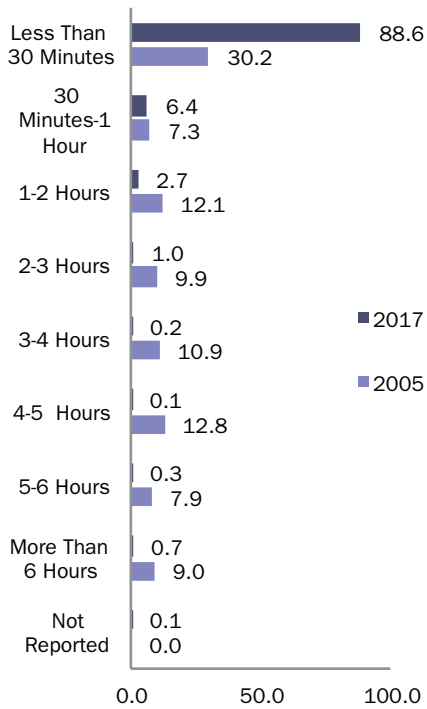

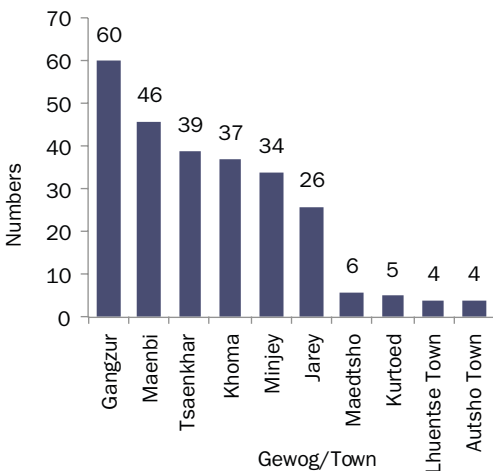

Table 7.5 Distribution of Households Experiencing Food Insufficiency in the last 12 Months by Area, Lhuentse 2017

Area	Experienced food insufficiency in the last 12 months			Total
	Yes	No	Not Reported	
Urban	2.2	97.5	0.3	360
Rural	9.2	90.8	0.0	2,751
Both Areas	8.4	91.6	0.0	3,111

ANNEX 1: 2017 PHCB INDICATORS: DEFINITIONS, NUMERATORS AND DENOMINATORS

Sl. No.	Indicators	Definition	Numerator	Denominator
1	Sex Ratio	Number of males for every 100 females	Number of Males	Number of Females
2	Child Dependency Ratio	Refers to dependents of children aged 0 to 14 years as a percentage of population aged 15 to 64.	Number of persons 0 to 14 years	Number of persons 15 to 64 years
3	Old Age Dependency Ratio	Refers to dependents of old age 65 years and above as a percentage of population aged 15 to 64.	Number of persons 65 years and above	Number of persons 15 to 64 years
4	Total Dependency Ratio	Sum of child dependency and old dependency.	Number of persons between 0 to 14 years and 65 years and above	Number of persons 15 to 64 years
5	Literacy Rate	The ratio of literate population aged 6 years and above to the total population of same age group expressed in percentage.	Population aged 6 years above who can read and write a short text in any language.	Total population aged 6 years and above.
6	Currently Attending School/ institute	The ratio of persons aged 6 years and above who are currently attending school/institute to the total population of same age group expressed in percentage.	Population aged 6 years above who are currently attending school/ institute.	Total population aged 6 years and above.
7	Previously Attended School/ institute	The ratio of persons aged 6 years and above who had attended school/institute in the past to the total population of same age group expressed in percentage.	Population aged 6 years above who had attended school/ institute in the past.	Total population aged 6 years and above.
8	Never Attended School/ institute	The ratio of persons aged 6 years and above who have never attended school/institute to the total population of same age group expressed in percentage.	Population aged 6 years above who have never attended school/ institute.	Total population aged 6 years and above.
9	Crude Birth Rate	Number of live births in a year per 1,000 population	Number of live births in a year	Total Population
10	General Fertility Rate	Number of births during a year per 1,000 women of reproductive age (15–49 years)	Number of live births in a year	Female Population (Ages 15-49)
11	General Marital Fertility Rate	Number of births during a year for every 1,000 women of reproductive age who are married or living together.	Number of live births in a year	Female Population (Ages 15-49) married or living together
12	Total Fertility Rate	Average number of children a woman would bear during her entire reproductive life, at the prevailing age-specific fertility rate. Σ (five-year age-specific birth rates for females aged 15 to 49) *5		

ANNEX 1: 2017 PHCB Indicators: Definitions, Numerators and Denominators

Sl. No.	Indicators	Definition	Numerator	Denominator
13	Disability Prevalence Rate	Any one domain/question is coded a lot of difficulty or cannot do at all.		
14	Crude Death Rate	The number of deaths in a year per 1,000 population	Total number of deaths.	Total population
15	Infant Mortality Rate	The number of deaths of children below the age one year per 1,000 live births in a year.	Total number of deaths of children below one year.	Total number of live births in a year.
16	Child Mortality Rate	The number of deaths of children between 1-4 years per 1,000 live births in a year.	Total number of deaths of children between 1-4 years.	Total number of live births in a year
17	Under Five Mortality Rate	The number of deaths of children below 5 years per 1,000 live births in a year.	Total number of deaths of children below 5 years.	Total number of live births in a year
18	Working-age Population	All persons aged 15 years and above are considered to be working-age population. It comprises of economically active (labour force) and inactive population.	Persons 15 years and above	Total Population
19	Economically Active (Labour Force)	All persons who are/were employed or unemployed during the during the reference period of the census are referred to as economically active population.	All persons employed and unemployed	Working-age population
20	Economically Inactive	Economically Inactive Population comprise of persons who were neither "employed" nor "unemployed" during the reference period.		
21	Unemployment Rate	Unemployed persons comprises of persons above 15 years and above who during the reference period were without work, currently available for work and seeking work. It is calculated as a percentage by dividing the number of unemployed individuals by all individuals currently in the labor force.	Number of unemployed persons	Labour force
22	Labour Force Participation Rate (LFPR)	LFPR is defined as the proportion of the working age population which is economically active or the labour force.	Economically active or labour force	Working-age population
23	Average Household Size	The ratio of the total population in regular households to the number of regular households in an area.	Total population in regular households in an area.	Number of regular households in an area.
24	Room Density	Persons per room.	Average household size.	Average number of rooms.
25	Improved Sanitation Facility	Proportion of households with improved sanitation facilities.	Number of households with flush toilet, ventilated improved pit (VIP), pit latrine with slab and composting toilet.	Total number of households.

2017 POPULATION AND HOUSING CENSUS OF BHUTAN (PHCB)

Sl. No.	Indicators	Definition	Numerator	Denominator
26	Improved Sources of Drinking Water	Proportion of households with improved drinking water sources.	Number of households with pipe water inside the dwelling, pipe water outside the dwelling, protect well/spring and rainwater.	Total number of households.
27	Reliable Water Supply	Reliable water supply is defined as availability of water at least during the critical time (5AM-8AM, 11AM-2PM and 5PM-9PM) adequate for washing and cooking.	Number of households with reliable water supply.	Total number of households.
28	Food Insufficiency	Not having food to feed all the household members during the last 12 months.	Number of households with food insufficiency.	Total number of households.
