7. Sample Outlets

Sample outlets are permanent establishments or retail shops from which monthly price of goods and services are collected or quoted. These include groceries, clothing and footwear, restaurants, hardware shops, vegetable vendors and service providers etc. The outlets are selected based on a set of pre-determined criteria. For current CPI, prices are collected from a sample of 557 outlets. Special procedures are applied to replace the outlets or the items, if they are no longer available or sold by the outlet.

8. Data Collection Method

Prices are collected online from the sampled outlets by price collectors using mobile application devices once every month.

FOREWORD

National Statistics Bureau (NSB) is pleased to release the Consumer Price Index (CPI) Bulletin for September 2014. This is the 10th series of monthly CPI Bulletin published by National Accounts and Price Division, NSB.

The Bulletin is compiled using December 2012 as the price reference period and tracks the price movements of 436 commodities and services in 20 districts and 2 major urban areas. The rebased CPI uses the Geometric Modified Laspeyres formula, and has separate indices for domestic and imported goods and services.

We thank all agencies and stakeholders for their support in bringing out this bulletin and look forward for their continued support.

October 2014

6. Market Basket

Market basket refers to a sample of goods and services which is representative of all goods and services purchased by the households. The present market basket has 436 items, as compared to 363 items in the previous CPI basket. The new re-based CPI uses the Classification of Individual Consumption According to Purpose (COICOP). The 12 major groups are:

1. Food and Non-Alcoholics Beverages;
2. Alcoholic Beverages & Narcotics;
3. Clothing and Footwear;
4. Housing, Water, Electricity, Gas and Other Fuels;
5. Furnishing, Household Equipment and Routine Household Maintenance;
6. Health;
7. Transport;
8. Communication;
9. Recreation and Culture;
10. Education;
11. Restaurant and Hotels;
12. Miscellaneous Goods and Services.

5. Index Calculation Formula

Geometric Modified Laspeyres formula is used to calculate the CPI:

$$P_{GYo} = \prod_{i=1}^n \left(\frac{P_i^t}{P_i^0} \right)^{S_i^b}$$

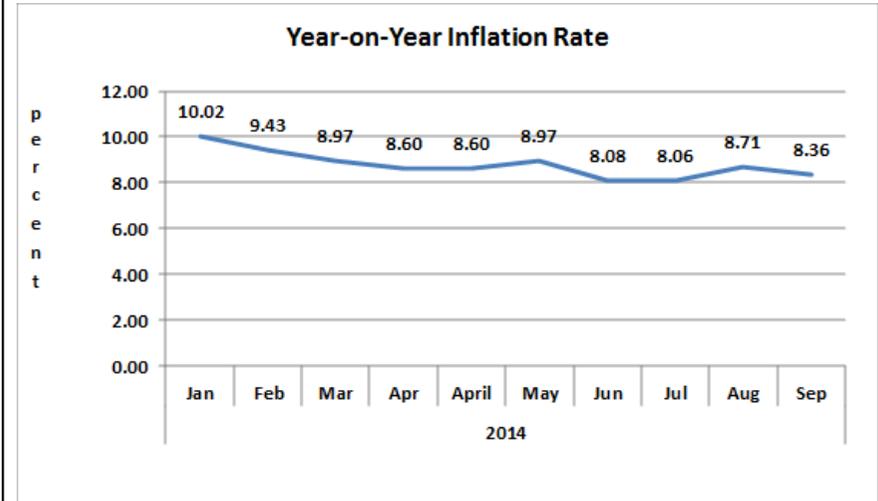

S_i^b = Expenditure Shares of the Base Period (weights from BLSS)

P_i^t = Current Period Price

P_i^0 = Previous Period Price

$\left(\frac{P_i^t}{P_i^0} \right)$ = Price Relatives

Graph 1: Year-on-Year Inflation

Year-on-Year Inflation Rate

The annual inflation rate for September 2014 [*i.e., from September 2013 to September 2014*] is 8.36% compared to 8.71% for previous month of August 2014. The corresponding inflation rates for the Food was 9.14% and Non-food was 7.84%. The prices for Transports went up by 14.16% and Food & non-alcoholic beverages by 9.72%.

Prices for domestically produced goods & services increased by 9.10% while imported goods increased by 7.81% over one year period *i.e.* from September 2013 to September 2014.

4. Reference Period

There is no single “base period” for a price index. It can mean different things to different users. In practice, there are three “reference periods” used.

- ◆ Weight Reference Period is the period during which household consumption values are collected. The weight-reference period for the new rebased CPI is 2012, that is, the period when the BLSS was conducted.
- ◆ Index Reference Period is the period when the index is set to 100. In the new CPI, the index reference period is December 2012.
- ◆ Price Reference Period is the period of the first price of each product used to calculate the elementary indices (indices for individual CPI items). The price reference period for the new CPI is the fourth Quarter 2012.

3. Weights

The weights reflect the relative importance or contribution to the total consumption expenditures of all households. It is determined using the spending patterns of households during some previous weight reference period.

It is important for the weights to reflect the current consumption patterns of the household. The more current the weights, the more reflective they are of current consumer spending patterns. The international standards recommend rebasing CPI every 5 years.

The current CPI weights were updated in 2012 following the conduct of the Bhutan Living Standard Survey (BLLS) in March – May 2012. Expenditure details were broken down into imported and domestic goods to facilitate calculation of domestic and imported inflation.

TECHNICAL NOTES

1. Concept and Definition of CPI

The Consumer Price Index (CPI) is a measure of changes in the average retail prices of a market basket of goods and services purchased by households for day-to-day living. It shows how much, on average, prices of goods and services have increased or decreased from a particular reference period, commonly known as the base period.

2. Uses of CPI

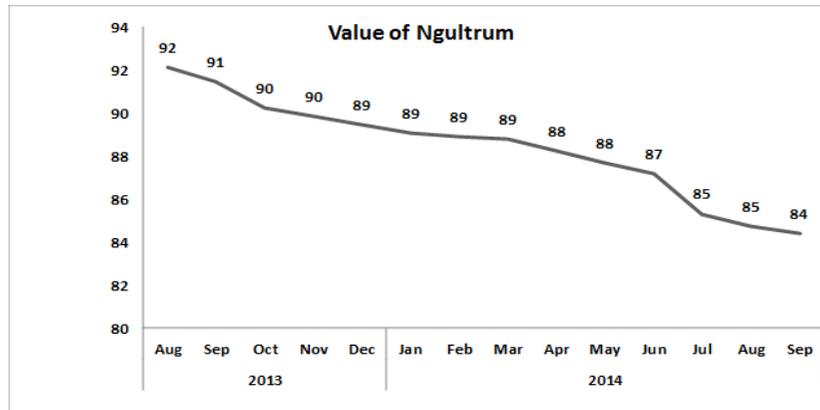

- ◆ As an economic indicator: - CPI is one of the major indicators that determine the effectiveness of an economic policy. It is used to formulate fiscal and monetary policies and monitor their effect on the overall economy. Business executives, labor leaders, and other private citizens use CPI as a guide to make economic decisions.
- ◆ As a means of adjusting income payments: -Many collective bargaining agreements use CPI to determine wage rates, and index various payments to adjust the effects of inflation.
- ◆ As a deflator of economic series: - CPI or its components is used as a deflator to adjust for price changes in various economic data series (e.g., GDP).
