

Consumer Price Index (CPI): September 2024

(Release date: 8th November, 2024)

1. Headline Inflation (Year-on-Year) – National level

The headline or overall inflation is 1.35 percent in September 2024 as compared to 2.05 percent in August 2024. This brings the national average inflation from January to September 2024 to 3.13 percent. This trend was primarily driven by rise in Food and non-alcoholic beverages.

Figure 1: Year-on-year Inflation, National (% change)

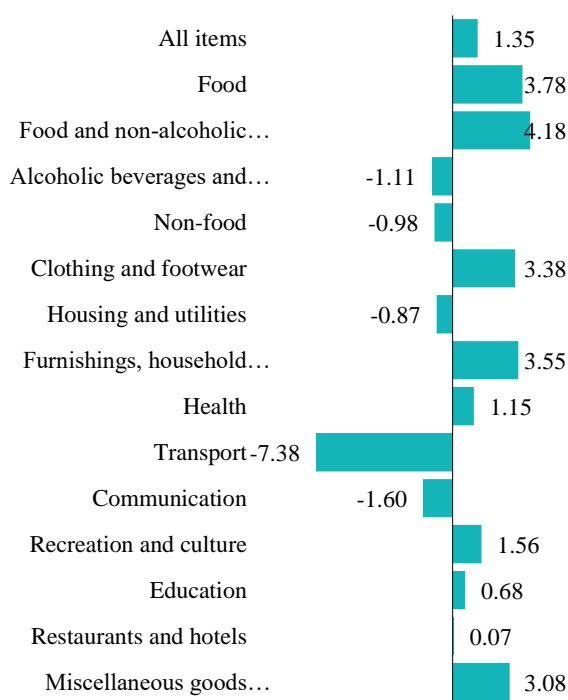

Figure 2: CPI by major categories, Y-O-Y (% change)

1.1. Food Inflation

The Food inflation increased to 3.78 percent in September 2024. Within the Food category, the Food & non-alcoholic beverages index recorded an increase of 4.18 percent, while the Alcoholic beverages & betel nuts index saw a drop of -1.11 percent.

1.2. Non-food Inflation

The Non-food inflation dropped to -0.98 percent in September 2024 from 0.99 percent in August 2024. This downward trend in the non-food category was mainly driven by decrease in the indices of Transport, and Housing & utilities to -7.38 percent and -0.87 percent, respectively.

2. Headline Inflation (Month-on-Month) National Level

Month-on-month inflation dropped to -0.10 percent in September 2024, down by 0.49 percentage points compared to August 2024. This was primarily driven by Transport (-2.90%) and Housing & utilities (-0.65%).

Figure 3: Month-on-Month Inflation, National (% change)

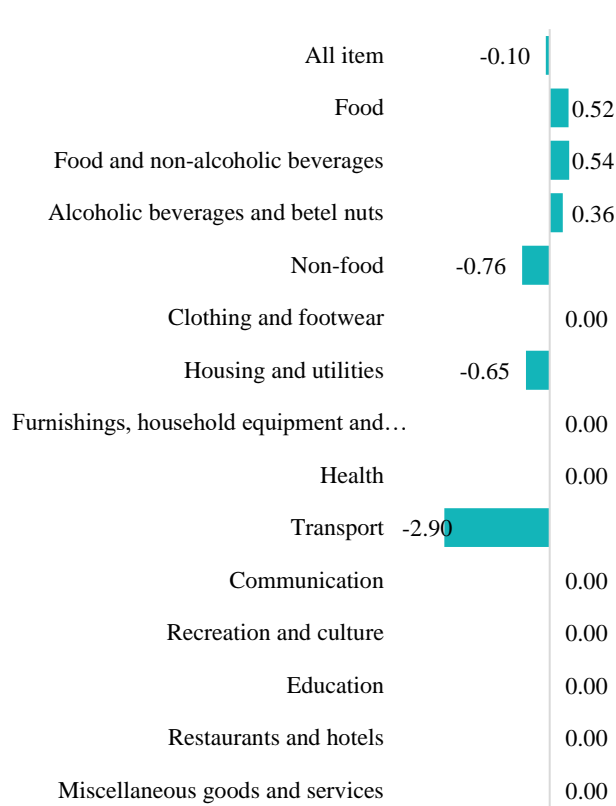

Figure 4: CPI by major categories, M-O-M (% change)

2.1. Food Inflation

Month-on-month Food inflation increased to 0.52 percent in September 2024. This upward trend was driven by an increase in the Food & non-alcoholic beverages index to 0.54 percent, and the Alcoholic beverages and betel nuts index recorded an increase of 0.36 percent.

2.2. Non-food Inflation

Month-on-month Non-food inflation dropped to -0.76 percent in September 2024. This downward trend in non-food was mainly driven by a drop in the Housing & utilities index to -0.65 percent, while the indices of Transport decreased to -2.90 percent.

3. Capital City and Regional CPI (Month-on-Month)

3.1. Capital City CPI

Month-on-month inflation for the capital city decreased to -0.15 percent in September. This increase was driven by a 0.52 percent rise in the Food index and a -0.76 percent drop in the Non-food index.

Figure 5: Month-on-month CPI by major categories, Capital City (% change)

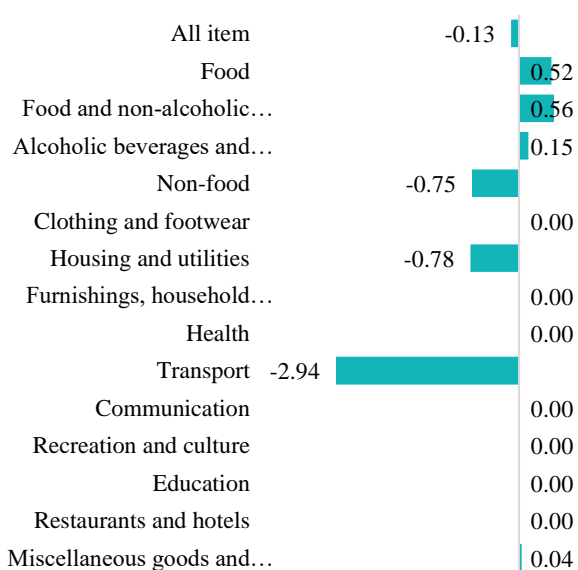

Food inflation increased to 0.52 percent. Within the Food category, the index for Food & non-alcoholic beverages rose to 0.56 percent, while the index of Alcoholic beverages & betel nuts remained unchanged.

The Non-food index dropped to -0.76 percent. In the Non-food category, the Transport index decreased to -2.51 percent and the Housing & utilities index saw a -0.64 percent drop.

3.2. Central CPI

In September 2024, the month-on-month inflation for the central region decreased to -0.13 percent compared to the previous month.

Figure 6: Month-on-month CPI by major categories, Central (% change)

The Food inflation increased to 0.52 percent, largely driven by a 0.56 percent increase in Food & non-alcoholic beverages index and a 0.15 percent increase in the Alcoholic beverages & betel nuts.

The Non-food inflation decreased to -0.75 percent, mainly driven by drop in Housing & utilities index to -0.78 percent and a -2.94 percent drop in the Transport index.

3.3. Eastern CPI

In September 2024, the month-on-month headline inflation rate for the eastern region decreased to -0.21 percent, mainly driven by a decrease in the Non-food index.

Figure 7: Month-on-month CPI by major categories, Eastern (% change)

Food inflation in the eastern region increased to 0.37 percent in September 2024. The Food & non-alcoholic beverages index increased to 0.39 percent and that of the Alcoholic beverages & betel nuts increased to 0.08 percent.

Non-food inflation decreased to -0.90 percent. This downward trend was mainly driven by the Housing & utilities index which dropped to -0.69 percent, and the Transport index decreased to -3.29 percent.

3.4. Western CPI

In September 2024, the month-on-month headline inflation of western region dropped to -0.06 percent. This was mainly driven by decrease in the index of Non-food.

Figure 8: Month-on-month CPI by major categories, Western (% change)

Food inflation recorded an increase of 0.55 percent in September 2024. The upward trend in food inflation was mainly driven by a 0.54 percent increase in Food & non-alcoholic beverages index and a 0.64 percent increase in the Alcoholic beverages & betel nuts index.

Non-food inflation in western region recorded a decline of -0.71 percent compared to August 2024, with the Transport index dropping to -2.67 percent and the Housing & utilities index decreasing to -0.57 percent.

4. Annual Average Inflation, National

The annual average national headline inflation from January 2023 to December 2023 eased to 4.23 percent in 2023, down by 1.41 percentage points from 5.64 percent in 2022. The downward trend in inflation were primarily driven by a slower annual increment in non-food index which decelerated to 4.44 percent in 2023.

Average food inflation rose to 3.97 percent, up by 0.02 percentage points from 3.95 percent in 2022. This moderate rise in food index was mainly driven by increase in the index of alcoholic beverages and betel nuts, which rose to 4.62 percent, an increase by 3.46 percentage points from 1.16 percent in 2022.

Figure 9: Annual average inflation, National (% change)

In 2023, the non-food index decelerated to 4.44 percent, from 7.10 percent in 2022. This deceleration was primarily due to a drop in communication and transport index to 1.06 percent and 0.85 percent respectively. However, significant drivers of inflation in the non-food category included health with an increase of 12.47 percent, housing and utilities with an increase of 8.21 percent, and clothing and footwear with an increase of 6.90 percent, among others.

5. Purchasing Power of Ngultrum

The purchasing power of the Ngultrum, as measured by CPI, stood at Nu. 56.4 as of September 2024 as compared to December 2012. This means, Nu. 100 in September 2024 is worth only Nu. 56.4 at December 2012 prices. The Purchasing Power of the Ngultrum has eroded by 1.33 percent in the last year (from September 2023 to September 2024) due to price increases in the economy.

Technical Note

1. Background

The Consumer Price Index (CPI) measures how the prices of consumer goods and services change over time on average. It helps to measure inflation, indicating if prices have decreased or increased from a specified reference period, called the base year. This index base year is used as a benchmark against which current price levels are compared. The CPI provides information on the purchasing power of consumers and the overall cost of living.

2. Scope and Coverage

The CPI includes the goods and services bought by households. A representative sample of these goods and services is selected based on household expenditure data. Prices for these sampled goods and services are collected from urban areas in the 20 Dzongkhags at different frequencies—monthly, quarterly, and annually - depending on how often the prices change. Data collection outlets are chosen through purposive sampling based on the popularity of the outlet and the availability of items.

To capture the price dynamics across various regions of the country, five different CPIs are being published monthly, starting from June 2024. The number of items included in each of the CPI baskets is as follows:

1. National level : 169 items
2. Eastern : 120 items
3. Western : 165 items
4. Central : 144 items
5. Capital City : 134 items

The items in the CPI are classified according to the *Classification of Individual Consumption According to Purpose (COICOP) 1999*. Approximately 500 outlets are selected for pricing.

3. Weights

The weights reflect the relative importance or share of expenditure on individual items within the total consumption expenditures for all households. These weights determine the impact each item has on the overall inflation. The weights for the current CPI are derived from the household consumption expenditure data of the Bhutan Living Standard Survey (BLSS), 2022 conducted every five years. The new rebased CPI basket along with its corresponding weights for National, Capital City, Western, Central, and Eastern are given below.

	National	Central	Eastern	Western	Capital City
All item	100.00	100.00	100	100.00	100.00

Table: New weights for the national, regional (central, eastern, western) and capital city

4. Reference Period

There are three “reference periods” used for CPI as given below:

- i. **Weight Reference Period** is the period during which household consumption expenditure data are collected. The weight-reference period for the new CPI is 2022, that is, the period when the BLSS was conducted.
- ii. **Index Reference Period** is the period when the index is set to 100. In the new CPI, the index reference period is 2023-24 (May 2023 to April 2024).
- iii. **Price Reference Period** is the period for which the prices of each product are used for calculating the elementary indices (indices for individual CPI items). The price reference period for the new CPI is April 2024.

5. Index Calculation

The Geometric Modified Young formula is used to calculate the CPI:

$$P_{GYO} = \prod_{i=1}^n \left(\frac{P_i^t}{P_i^o} \right)^{s_i^b}$$

S_i^b = Expenditure Shares of the Base Period (weight from BLSS)

P_i^t = Current Period Price

P_i^o = Previous Period Price

$\left(\frac{P_i^t}{P_i^o} \right)$ = Price Relatives
