Consumer Price Index (CPI): June 2021

(Release date: 27 July 2021)

Highlights

Annual inflation rate rose 7.42 percent

- Main contributors
 - Food and non-alcoholic beverages rose 9.55 percent, contributed by increase in meat prices by 37.21 percent, bread and cereals by 7.75 percent and oils & fats by 21.63 percent.
 - Transport rose 7.16 percent, mainly due to increase in fuel prices (petrol and diesel) by about 40 percent
- Highest increase
 - Alcoholic beverages and betel nuts by 18.54 percent, contributed by betel nuts with 33.27 percent increase.
- Communications decreased by 10.39 percent, due to reduction in call and data charges.

Monthly inflation dropped by 0.97 percent

- Food and non-alcoholic beverages decreased by 2.51 percent, due to decrease in vegetable prices by 11.23 percent. Within the vegetables, price of chilli contributed to the decrease.
- Non-food prices rose 0.30 percent due to increase in prices of fuel by about 2 percent.

Chart 5: Purchasing Power of Ngultrum (PPN)

The purchasing power of Ngultrum as measured by CPI is Nu. 65 as of June 2021 compared to December 2012. This means, Nu. 100 in June 2021 is worth only Nu. 65 at December 2012 prices. The PPN has dropped by 6.91 percent in the past 12 months (from June 2020 to June 2021) due to price increase in the economy.

Technical notes

Concept and Definition of CPI

The Consumer Price Index (CPI) is a measure of average price changes in the basket of goods and services purchased by households over time. It shows how much, on average, prices of goods and services have increased or decreased from a particular reference period, commonly known as the Index reference.

Scope and coverage

The CPI covers the goods and services consumed by the households and a sample of goods and services are selected using the household expenditure data to measure the inflation experienced by the households. Prices of the sampled goods and services are collected from urban areas in 20 Dzongkhags on monthly, quarterly and annual frequency depending on the price volatility of the items. The outlets for data collection are selected based on purposive sampling considering the popularity of the outlet and availability of the items.

CPI baskets has a total of 113 items (314 varieties) classified according to Classification of Individual Consumption According to Purpose (COICOP). Total of about 450 outlets are selected for pricing.

Weights

Weights reflect the relative importance or share of the individual item to the total consumption expenditures of the households. It determines the impact an individual item will have to the overall inflation. Weight for the current CPI is derived using the household consumption expenditure data from the Bhutan Living Standard Survey (BLSS) conducted every five years. The current weight is based on BLSS 2017.

Price reference and index reference

Price reference is the period for which the prices are used as denominator for the index calculation. The price reference period for CPI is April 2019.

Index reference period is the period for which the index is set as 100. The index reference period is April 2019.

Index Calculation Formula

Geometric Modified Laspeyres formula is used to calculate the CPI:

$$P_{GYo} = \prod_{i=1}^n \left(\frac{P_i^t}{P_i^o} \right)^{s_i^b}$$

S_i^b = Expenditure Shares of the Base Period (weight from BLSS)

P_i^t = Current Period Price

P_i^o = Previous Period Price

$\left(\frac{P_i^t}{P_i^o} \right)$ = Price Relatives

Calculating Percent Changes

Month-on-month percent change measures the average price change between current month and previous month and serves as useful indicator of short-term price movement.

Year-on-year percent change measures the average price change between the specific month with that of the same month of the previous year.

Following is an example of computing index point and percent changes:

- Index point change

All item price index	104.50
Less previous price index	101.25
Equals index point change	3.25

- Index percent change

Index point change	3.25
Divided by Previous Price Index	101.25
Equals	0.032
Result multiplied by 100	0.032 x 100
Equals percent changes	3.2
