Department of Livestock

Forward

The Livestock Statistics 2011 is the sixth series of statistics publication by the Department of Livestock in its comprehensive effort to record information on livestock and production in the kingdom of Bhutan.

The Publication is presented in two section:

1. Section I contains livestock population and production data at Dzongkhag level. The data for the central farms are included under respective Dzongkhags.
2. Section II contains livestock population and production data at Geog level. The data for the central farms are included under their respective Geogs.

We hope that the data will be useful, not only for the planners and researchers but also for the policy makers, who are involved in the development of the RNR sector.

I would like to extend my heartiest appreciation to all my colleagues in the department and the Dzongkhag livestock sector, and in particular to the IMS of the department for their invaluable efforts in bringing out this useful and informative publication.

Karma Dukpa
Director General

I

Post Box No: 113	Telephone PABX +975-2-322418/ 322795/ 322384	Direct line +975 2 323146/335168	Facsimile +975 2 322094/335167
---------------------	---	-------------------------------------	-----------------------------------

Objectives

- To establish reliable information on livestock population and production for planning and monitoring of livestock development programmes.
- To provide data for preparation of plans and programs and to understand trends in livestock population and production.

Data collection, validation

The data collecting format is designed by the IMS of the department and distributed to all the Dzongkhags. Data was collected from 205 geogs of the country at house hold level by the livestock extension personnel and also from the central farms of the department. The data validation and compilation is first done at the Geog level by the extension staff who collects the data then at dzongkhag level by the Dzongkhag Livestock Officer and forwarded to IMS of the department for further validation, compilation and publication..

Limitation on the data collected.

- As our respondents are farmers with different social and educational background, the response errors are likely to be high although various techniques are used to get correct information.
- The farmers can not keep records of production figures due to low literacy level among the general population.
- Under reporting of population and production due to taxation is another source of error.
- Incompetent source of data can be another source of error.

Summary livestock population 2011
